

470- 960 MHz POWER AMPLIFIER MODULE WPM0509AE¹

WPM0509AE is a wideband, high power, and high linearity amplifier. The amplifier offers the exceptional +/- 0.50 dB gain flatness, 31.0 dB gain, 35.0 dBm P_{1dB} and output 49.0 dBm IP₃ at output composite power of 28 dBm at the frequency range from 470 MHz to 960 MHz.

WPM0509AE is most suitable for digital broadcast, cellular base stations, wireless data communications, tower top receiver amplifiers, cellular micro-cells, last-mile wireless communication systems, and wireless measurement applications of UHF and Cellular bands.

WPM0509AE has been designed to meet rugged standard of MIL-STD-202G and is RoHS complied product.

Key Features:

Impedance:	50 Ohm
Output IP ₃ :	49.0 dBm
Gain:	31.0
Gain Flatness:	+/-0.5 dB
Input VSWR:	1.5:1 typical
Output VSWR:	1.5:1 typical
P _{1dB} :	35.0 dBm
Single Power Supply:	0.95, @ +10 V
Frequency Range:	470 ~ 960 MHz
Operating Temperature:	-40 ~ +85 °C

Absolute Maximum Ratings²:

Symbol	Parameters	Units	Absolute Maximum
V _{dd}	DC Power Supply Voltage	V	10.5

As shown in **Figure 1**, the typical gain of the WPM0509AE is 31.0 dB across 470 MHz to 960MHz. The typical input and output return losses are 14 dB and better than 12 dB, respectively.

The output 1-dB compression point and IP_3 are shown in **Figure 2**. WPM0509AE offers typical 35.0 dBm or higher P_{1dB} throughout the passband.

Figure 3 provides the output IP_3 performance vs. frequency at different output power level per tone of the two-tone intermodulation test. By slightly adjusting the V_{dd} voltage, the amplifier's IP_3 performance can be optimized for P_{out} of each tone at the range from 23 dBm to 26 dBm or the 26 dBm to 29 dBm composite output power. The IP_3 reaches 49.0 dBm or higher in this power range.

Figure 4 illustrates the IP_3 performance vs. output composite power at different frequencies at the optimized V_{dd} voltages. The IP_3 is over 49 dBm at the 28 dBm output total power level in most frequencies.

Figure 5 is the noise figure performance. The noise figure is below 3.0 dB at room temperature.

Figure 6 is the small signal performance of the amplifier at the extended frequencies. The amplifier has nice harmonics rejection.

Figure 7 demonstrates the stability factor k of the amplifier. k is great than 1 in any frequency and thus the amplifier is unconditional stable.

Figure 8 is the block diagram of internal circuit of WPM0509AE. It is a two-stage amplifier with the DC block capacitors at the input and output RF ports. All the RF matching networks, DC-DC converter, DC bias circuitries, and limited temperature compensation circuits are built in.

Figure 9 shows the mechanical outline of WPM0509AE. It is a WanTcom standard pallet package, WPM-2. The amplifier module is soldered on top of a very small gold plated metal flange plate. The plate can be soldered or mounted on a sufficient heat sink for the thermal dissipation. The thermal compound is required on bottom of the plate if the amplifier is bolt on the heat sink instead soldering.
